Vreugdenhil Breeding & Seeds

Vreugdenhil Breeding & Seeds develops new fruit vegetable varieties in potplant and hobby garden segment.

Through innovation, partnerships, product development and an own breeding program, the goal is to continuously expand the assortment and continue to surprise both clients and consumers with unique products and taste experiences.

Vreugdenhil Breeding & Seeds part of Vreugdenhil Young Plants

Started over 50 years ago as a small family business by the Vreugdenhil brothers, now grown into an international supplier of young plants throughout Europe. Vreugdenhil Young Plants grows a wide range of crops. These are an important start of a successful cultivation for many growers.

Vreugdenhil Breeding & Seeds

In recent years, there has been an acceleration in urbanisation worldwide. Many people have limited living and outdoor space.

The growing trend to grow and harvest your own produce is one that will continue for some time. Our compact vegetable varieties for balcony, terrace and windowsill fill the need for this trend. Besides the compact varieties, we also have a breeding range for ongrowing tomato varieties for the hobby gardener. Phytophthora and mildew resistance form an important part of this. These varieties are unique, productive and resilient for outdoor cultivation.

Vreugdenhil Breeding & Seeds has the ambition to be innovative. The breeding team works daily on product development focused on taste, ornamental value, cultivation aspects and sustainability. We supply vegetable plant seeds to professional growers in various countries.

Indeterminate tomato varieties for vegetable garden

Through product development of our own breeding program, Vreugdenhil Breeding & Seeds is constantly expanding its range. We want to give the true vegetable garden enthusiast the opportunity to grow our high-quality tomatoes in their own garden.

The on-growing varieties are bred for both the experienced and novice vegetable gardener. It offers the possibility to grow strong tomato plants in cooler climates. This allows you to take on a new challenge alongside our existing range.

Vegetable garden tomatoes with outstanding quality

From our own breeding, several varieties of tomatoes have been developed: Cherry, Cocktail Round and Beef. While breeding these varieties, we paid attention to several factors. In tomatoes, productivity and strong garden performance are key. Our tomatoes are phytophthora resistance.

Available varieties

Round tomato pink

Prosresco is a fine pink round tomato of about 75-120 grams. As a result, the plants have sufficient vigor and easily produce more than six fruits on the vine. Moreover, the fruits have a nice green collar.

Cocktail tomato

In the cocktail segment, there are three different varieties. Each variety is unique in its type and size of fruit(s).

Propullus and Prometes have fruits between 22-35 grams where Prometes can also be sold as a bigger cherry-type. Both varieties have a high production potential where the fruits have a fresh sweet taste.

The fruits of Provegeto weigh an average of 50 grams and have a distinctive robust fruit shape. All three varieties have long clusters of 10-12 fruits per cluster which hang on vigorous plants.

Round tomato red

Plants with high vigor and open crop structure. Provigeo has a darker crop color than Provigor. Both varieties produce clusters of 8-10 fruits weighing 75-100 grams. The main difference between the two varieties is that the fruits of Provigeo have a green collar and those of Provigor are pale. Provigor is less susceptible to powdery mildew.

Cherry tomato

The cherry tomato is characterized as a sweet little tomato. We have several varieties available for this segment, each with its own characteristics. Proventus is unique because of its branched trusses on the plant. This gives it a high proportion of fruits on the plant and allows for daily harvesting of the cherry tomatoes.

For fast truss splitting, fine fruits and a beautiful herringbone truss, choose Progermen. Like Proviresco and Promellitus, this variety is suitable for harvesting both loose and truss. The narrow plant structure allows Progermen, Proviresco and Promellitus to be grown at higher planting densities.

Name	Variety	Crop	Color	Green Shoulder	Resistance (HR:)	Resistance (IR:)	Average fruit weight
Prohini	PH5005	Cherry	Red	Present	HR: ToMV:0-2 / Pf:A-E / Forl / Fol: 0,1	IR: Pi	15

Proven concept Pick-&-Joy®

Under the brand Pick-&-Joy®, Vreugdenhil Young Plants introduced the first compact tomato plant (Pick-a-Tom) in 2005. This brand has since grown into a unique assortment of more than 20 varieties. It offers flavor and adds ambiance to the balcony, terrace, or garden.

With the vegetable plants of Pick-&-Joy®, you bring harvest into your home and get to enjoy real freshness. Immediately after purchase, the consumer can start to pick and enjoy delicious and healthy vegetables as a snack or use them in various dishes.

The varieties are sold through different channels like d.i.y. garden centers and supermarkets.
